

New Amal security stack

The velocity stack launched by Amal in 1972 for use on Amal Concentric carburetors has been welcomed with enthusiasm by riders and dealers alike.

In response to customer demand for a tamper-resistant stack, Amal are now pleased to announce the introduction of their new *Security Stack*. To discourage interference with the carburetor when a motorcycle is left unattended, the new stack is protected by a strong wire mesh firmly secured across the bell-mouth entrance.

The custom-made stack offers the rider all the advantages of the existing model *plus* security. The super-smooth tract shape tapers with precise concentricity straight into the carburetor bore. This optimises air and gas flow into the cylinder, improves engine 'breathing', and produces a corresponding increase in power output.

The security stack is supplied with three fixing screws ready for immediate fitting and exact lining up on your Amal Concentric.

For Series 600 Amal Concentric carburetor, specify security stack Part No. 622/221.

For Series 900, specify Part No. 928/112.

For Series 1000, specify Part No. 1034/096.
